## **@ PURE INDULGENCE**

Medical Skin Clinic by Emma Millam (RN). Aesthetic Nurse Practitioner, Independent Prescriber, Harley Street trained specialist in muscle relaxing injections and dermal fillers. Muscle relaxing injections are small injections into target muscles to reduce the appearance of lines by smoothing the skin. This product has been used for over 30 years. It is used for different conditions within the NHS such as; hyperhidrosis, migraines, blepharospasm and urinary incontinence. The muscle relaxing injections work by temporarily blocking the signals from the nerves to the muscles. The injected muscles can no longer contract, which causes the wrinkles to relax and soften. Results are individualised to the particular client and last between 3-5 months. We offer many different injectable treatments to smooth and improve the signs of aging skin. Product and treatment choice is dependent on an in depth clinical assessment and consultation, taking into consideration patient preference alternatives and informed choice. Areas that can be treated are frown lines which are normally vertical lines that appear between the eye brows. Forehead lines, normally appear horizontally across the forehead. Crows feet lines, which appear around the eyes. Various techniques and treatments are available depending on the result that the client is looking to achieve.

### **DERMAL FILLERS**

Belotero, Juvaderm and Teocoyal are all products used within the clinic. All these hyaluronic acid fillers, when injected, give volume and hydration to reduce wrinkles. Hyaluronic acid is a substance of the skin that supports the structure of the skin and helps the skin stay supple and smooth. Hyaluronan diminishes in the skin as we age and so lines and wrinkles form. Belotero is hyaluronic acid filler that plumps up wrinkles by gently replacing the lost hyaluronan and restoring support in the skin.
